SUMMARY

I am a Data Analyst with an M.S. in Biostatistics from Harvard University and a dual background in Computer Science and Mathematics. Experienced in designing automated data pipelines, executing statistical inference and predictive modeling, and deploying interactive analytics tools across complex multivariate datasets. Adept at translating empirical data into actionable business and research insights using Python, SQL, and R.

EDUCATION

Harvard University

M.S. Biostatistics, GPA: 3.94

September 2024 - March 2026

Boston, MA

- Thesis: EB-Coloc: Improving Calibration of Genetic Colocalization Probabilities Using Empirical Bayes
- Coursework: Generalized Linear Models, ML/AI-Ops, Survival, Longitudinal Analysis, Epidemiology

University of Maryland College Park

B.S. Computer Science, B.S. Mathematics, GPA: 3.88

September 2020 - May 2024

College Park, MD

- Awards: University Honors Program, Presidential Scholarship
- Coursework: Mathematical Statistics, Bioinformatics, Data Structures and Algorithms, OOP, Numerical Methods

EXPERIENCE

Absolute Analytics LLC | Client: AVEO Pharmaceuticals Inc.

Statistical Programming Consultant

April 2026 - September 2026

Remote

- Engineered an automated data pipeline aggregating biweekly raw EDC records for a Phase III oncology trial, building an interactive RShiny dashboard with dynamic visualization modules and multi-parameter filtering to monitor patient safety trends in real time.
- Conducted independent dual-programming quality control (QC) for SDTM domains, ADaM analysis datasets, and TFLs in SAS to ensure strict CDISC standards, protocol alignment, and data integrity.

Regeneron Pharmaceuticals, Inc.

Statistical Programming Intern

June 2025 - August 2025

Warren, NJ

- Analyzed clinical protocol deviation distributions across Phase II/III studies, developing an RShiny operational monitoring tool to automate anomaly detection and streamline cross-functional review workflows.
- Validated CDISC-compliant SDTM, ADaM datasets, and regulatory TFLs using SAS, executing tipping point sensitivity analyses to evaluate trial integrity and missing data assumptions.

University of Maryland School of Public Health

Graduate Research Assistant

June 2024 - July 2024

College Park, MD

- Co-authored bioRxiv preprint ([doi: 10.1101/2025.04.10.648218](https://doi.org/10.1101/2025.04.10.648218)) on applying Bayesian network analysis to infer causal regulatory relationships between genes and noncoding RNAs.
- Built an interactive RShiny application to visualize high-dimensional transcriptomic associations, improving data accessibility for research collaborators.

University of Maryland Civil Engineering Department

Risk Analysis Researcher

June 2023 - August 2023

College Park, MD

- Conducted an independent NLP and sentiment analysis study on 8.7 million geo-located Tweets to quantify hurricane impacts on critical healthcare infrastructure, providing insights on emergency disaster preparedness.

PROJECTS

Men's Professional Tennis Analysis

Tools: Python, statsmodels, pandas, matplotlib

2022

- Evaluated performance advantages across professional ATP tour matches by applying multivariate linear regression, two-sample hypothesis testing, and exploratory data analysis on physical attributes (height, dominant hand).

AI Note-Taking Application

Tools: Docker, Python Flask, Javascript, Pulumi/Kubernetes, Github CI/CD

2025

- Developed a full-stack AI note-taking platform supporting document ingestion and semantic question answering powered by an integrated RAG pipeline trained on academic reference corpora.

TECHNICAL SKILLS

- Data Analysis: EDA, Hypothesis Testing, Regression Analysis, Bayesian Inference, Machine Learning, NLP
- Programming: SQL/MySQL, Python, R, SAS, Java, C/C++, JavaScript, MATLAB
- Frameworks: panda/numpy, statsmodels, sklearn, RShiny, plotly, matplotlib, Docker, Python Flask, MongoDB
